

**Amendments to the claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (previously presented) A formable, bright metallized laminate, comprising:  
a formable clear coat film;  
a first discontinuous layer of metal islands deposited on said formable clear coat film;  
and  
a second discontinuous layer of metal islands, wherein said first discontinuous layer of metal islands is positioned between said formable clear coat film and said second discontinuous layer of metal islands, and wherein said formable clear coat film has a microscopically-smooth surface, wherein the microscopically-smooth surface of said formable clear coat film has a roughness average of less than about 0.75 micron.
2. (canceled)
3. (canceled)
4. (original) A metallized laminate according to Claim 1, wherein said formable clear coat film is a tinted clear coat film.
5. (previously presented) A metallized laminate according to Claim 1, wherein said formable clear coat film has a graphic design pattern applied to it.
6. (original) A metallized laminate according to Claim 1, wherein said formable clear coat film comprises polyvinyl fluoride.
7. (original) A metallized laminate according to Claim 1, wherein said formable clear coat film comprises polyvinylidene difluoride.
8. (original) A metallized laminate according to Claim 1, wherein said formable clear coat film is a polymeric composition selected from the group consisting of fluoropolymers, acrylic polymers, polyurethanes, ionomers, polycarbonates, polyolefins, polyethylene glycol-

modified polyesters, polyamide polymers, and copolymers, blends, and alloys that include these polymeric compositions.

9. (original) A metallized laminate according to Claim 1, wherein said formable clear coat film comprises between about 10 and 70 weight percent of an acrylic polymer and between about 30 and 90 weight percent of a fluoropolymer.

10. (original) A metallized laminate according to Claim 9, wherein said formable clear coat film comprises between about 30 and 50 weight percent of an acrylic polymer and between about 50 and 70 weight percent of a fluoropolymer comprising polyvinylidene difluoride.

11. (original) A metallized laminate according to Claim 1, said first discontinuous metal layer having a first surface that is contiguous to said formable clear coat film, and a second surface that is contiguous to said second discontinuous metal layer, wherein said second surface of said first metal layer includes a microscopic transitional sub-layer.

12. (original) A metallized laminate according to Claim 11, wherein said microscopic transitional sub-layer is a plasma-treated sub-layer.

13. (original) A metallized laminate according to Claim 11, wherein said microscopic transitional sub-layer is a deposited metal oxide sub-layer.

14. (previously presented) A metallized laminate according to Claim 13, wherein the composition of said microscopic transitional metal oxide sub-layer is an oxide of the metal that forms said first discontinuous layer of metal islands.

15. (previously presented) A metallized laminate according to Claim 13, wherein the composition of said microscopic transitional metal oxide sub-layer is an oxide of a metal that is different from the metal that forms said first discontinuous layer of metal islands.

16. (original) A metallized laminate according to Claim 1, wherein said first discontinuous metal layer is selected from the group consisting of indium, tin, and alloys and blends thereof.

17. (original) A metallized laminate according to Claim 1, wherein said first discontinuous metal layer and said second discontinuous metal layer are selected from the group consisting of aluminum, cadmium, cobalt, copper, chromium, gallium, gold, indium, iron, nichrome, nickel, palladium, platinum, rhodium, stainless steel, tin, zinc, and alloys and blends containing these metals.

18. (original) A metallized laminate according to Claim 1, wherein said second discontinuous metal layer has the same composition as said first discontinuous metal layer.

19. (original) A metallized laminate according to Claim 1, wherein said second discontinuous metal layer has a different composition from said first discontinuous metal layer.

20. (original) A metallized laminate according to Claim 1, wherein said second discontinuous metal layer comprises metal islands having an average width of less than about 400 nm.

21. (original) A metallized laminate according to Claim 1, wherein said second discontinuous metal layer comprises metal islands having an average width of less than about 200 nm.

22. (original) A metallized laminate according to Claim 1, wherein said second discontinuous metal layer comprises metal islands having an average width of less than about 100 nm.

23. (original) A metallized laminate according to Claim 1, further comprising at least one additional discontinuous layer of metal islands positioned between said first discontinuous metal layer and said second discontinuous metal layer.

24. (previously presented) A metallized laminate according to Claim 23, wherein:  
all discontinuous metal layers are contiguous; and  
said first discontinuous metal layer and each said additional discontinuous metal layer have a first surface that is nearer the formable clear coat film and a second surface that is on the

side opposite to the side that is nearer the formable clear coat film, wherein each said second surface comprises a microscopic transitional sub-layer.

25. (previously presented) A metallized laminate according to Claim 1, further comprising an adhesive layer positioned on said second discontinuous metal layer, on the side opposite to the side nearer said first discontinuous metal layer.

26. (original) A metallized laminate according to Claim 25, wherein said adhesive layer comprises a pressure-sensitive adhesive.

27. (original) A metallized laminate according to Claim 25, wherein said adhesive layer comprises a heat-reactive adhesive.

28. (original) A metallized laminate according to Claim 25, wherein said adhesive layer comprises a crosslinking adhesive system.

29. (original) A metallized laminate according to Claim 25, wherein said adhesive layer comprises a multicomponent adhesive.

30. (original) A metallized laminate according to Claim 25, wherein said adhesive layer comprises polyurethane.

31. (original) A metallized laminate according to Claim 25, wherein said adhesive layer comprises acrylic.

32. (original) A metallized laminate according to Claim 25, wherein:  
said adhesive layer comprises a polyurethane layer and an acrylic layer; and  
said polyurethane layer of said adhesive layer is positioned between said second discontinuous metal layer and said acrylic layer of said adhesive layer.

33. (original) A metallized laminate according to Claim 25, wherein:  
said adhesive layer comprises a polyurethane layer, an acrylic layer, and a chlorinated polyolefin layer;

said polyurethane layer is positioned between said second discontinuous metal layer and said acrylic layer; and

said acrylic layer is positioned between said polyurethane layer and said chlorinated polyolefin layer.

34. (original) A metallized laminate according to Claim 25, wherein:

said adhesive layer comprises a layer made of an acrylic/polyurethane blend, and a chlorinated polyolefin layer; and

said acrylic/polyurethane layer is positioned between said second discontinuous metal layer and said chlorinated polyolefin layer.

35. (original) A metallized laminate according to Claim 25, further comprising a thermoplastic backing layer placed on said adhesive layer.

36. (original) A metallized laminate according to Claim 35, wherein said thermoplastic backing layer is selected from the group consisting of polyvinyl chloride, thermoplastic olefins, polycarbonates, acrylonitrile-butadiene-styrene copolymers, polystyrene, polyamide polymers, polyethylene, polypropylene, and copolymers, blends, and alloys including these polymeric compositions.

37. (previously presented) A metallized laminate according to Claim 35, wherein the metallized laminate incorporates a single tinted layer selected from the group consisting of said clear coat film, said adhesive layer, and said thermoplastic backing layer.

38. (previously presented) A metallized laminate according to Claim 1, further comprising an adhesive layer contiguously positioned on said second discontinuous metal layer, on the side opposite to the side nearer said first discontinuous metal layer.

39. (previously presented) A metallized laminate according to Claim 38, further comprising a thermoplastic backing layer contiguously positioned on said adhesive layer, on the side opposite to the side nearer said second discontinuous metal layer, wherein said adhesive layer comprises polyurethane and said thermoplastic backing layer is selected from the group consisting of polyvinyl chloride and acrylonitrile-butadiene-styrene copolymers.

40. (original) A metallized laminate according to Claim 38, further comprising a thermoplastic backing layer; and wherein said adhesive layer comprises a polyurethane layer and an acrylic layer, said polyurethane layer of said adhesive layer being contiguously positioned between said second discontinuous metal layer and said acrylic layer of said adhesive layer; and wherein said thermoplastic backing layer comprises an acrylonitrile-butadiene-styrene copolymer layer contiguously positioned on said acrylic layer of said adhesive layer.

41. (original) A metallized laminate according to Claim 38, further comprising a thermoplastic backing layer; and

wherein said adhesive layer comprises a polyurethane layer, an acrylic layer, and a chlorinated polyolefin layer, said polyurethane layer being contiguously positioned between said second discontinuous metal layer and said acrylic layer, and said acrylic layer being contiguously positioned between said polyurethane layer and said chlorinated polyolefin layer; and

wherein said thermoplastic backing layer comprises a thermoplastic olefin layer contiguously positioned on said chlorinated polyolefin layer of said adhesive layer.

42. (original) A metallized laminate according to Claim 38, further comprising a thermoplastic backing layer;

wherein said adhesive layer comprises an acrylic/polyurethane layer and a chlorinated polyolefin layer, said acrylic/polyurethane layer being contiguously positioned between said second discontinuous metal layer and said chlorinated polyolefin layer; and

wherein said thermoplastic backing layer comprises a thermoplastic olefin layer contiguously positioned on said chlorinated polyolefin layer of said adhesive layer.

43. (previously presented) A metallized laminate according to Claim 1, further comprising at least one additional formable clear coat film positioned on said formable clear coat film, on the side opposite to the side nearer said first discontinuous metal layer.

44. (previously presented) A metallized laminate according to Claim 1, further comprising an extensible mask layer on the surface of said formable clear coat film on the side opposite to the side nearer said first discontinuous metal layer.

45. (original) A metallized laminate according to Claim 1, further comprising a thermoplastic leveling layer that is positioned between said formable clear coat film and said first discontinuous metal layer.

46. (original) A metallized laminate according to Claim 45, wherein said thermoplastic leveling layer comprises polyvinyl fluoride and said formable clear coat film comprises polyvinylidene difluoride.

47. (original) A metallized laminate according to Claim 45, further comprising a thermoplastic primer layer positioned between said formable clear coat film and said leveling layer.

48. (original) A part formed from the formable metallized laminate of Claim 1.

49. (original) A part according to Claim 48 that has been formed using a technique selected from the group consisting of injection molding, blow molding, compression molding, thermoforming, vacuum forming, in-mold forming, and extrusion lamination.

50. (original) A formable, bright metallized laminate, comprising:  
a formable polymeric clear coat film;  
a first discontinuous layer of metal islands deposited on said clear coat film; and  
a second discontinuous layer of metal islands, wherein said first discontinuous layer of metal islands is positioned between said clear coat film and said second discontinuous layer of metal islands;

wherein said first discontinuous metal layer has a first surface that is contiguous to said formable clear coat film, and a second surface that is contiguous to said second discontinuous metal layer, wherein said second surface of said first metal layer includes a microscopic transitional sub-layer.

51. (original) A metallized laminate according to Claim 50, wherein said microscopic transitional sub-layer is a plasma-treated sub-layer.

52. (original) A metallized laminate according to Claim 50, wherein said microscopic transitional sub-layer is a deposited metal oxide sub-layer.

53. (original) A metallized laminate according to Claim 50, wherein said second discontinuous metal layer comprises metal islands having an average width of less than about 200 nm.

54. (original) A metallized laminate according to Claim 50, wherein said second discontinuous metal layer comprises metal islands having an average width of less than about 100 nm.

55. (original) A metallized laminate according to Claim 50, wherein said formable clear coat film is a polymeric composition selected from the group consisting of fluoropolymers, acrylic polymers, polyurethanes, ionomers, polycarbonates, polyolefins, PEG-modified polyesters, polyamide polymers, and copolymers, blends, and alloys that include these polymeric compositions.

56. (original) A metallized laminate according to Claim 50, wherein said first discontinuous metal layer and said second discontinuous metal layer are selected from the group consisting of aluminum, cadmium, cobalt, copper, chromium, gallium, gold, indium, iron, nichrome, nickel, palladium, platinum, rhodium, stainless steel, tin, zinc, and alloys and blends containing these metals.

57. (original) A metallized laminate according to Claim 50, further comprising an additional formable clear coat film positioned on said formable clear coat film, opposite said first discontinuous metal layer.

58. (previously presented) A metallized laminate according to Claim 50, further comprising an adhesive layer placed on said second discontinuous metal layer, on the side opposite to the side nearer said first discontinuous metal layer.

59. (original) A metallized laminate according to Claim 58, further comprising a thermoplastic backing layer placed on said adhesive layer.

60. (original) A part formed from the metallized laminate of Claim 50.

61. (original) A formable, bright metallized laminate, comprising:

a formable clear coat film; and

a plurality of discontinuous metal island layers deposited on said clear coat film, said plurality of discontinuous metal island layers comprising a first outer discontinuous layer of metal islands that is deposited on said clear coat film, a second outer discontinuous layer of metal islands, and at least one inner discontinuous layer of metal islands positioned between said first and second outer discontinuous metal layers.

62. (original) A metallized laminate according to Claim 61, wherein said formable clear coat film comprises polyvinyl fluoride.

63. (original) A metallized laminate according to Claim 61, wherein said-formable clear coat film comprises polyvinylidene difluoride.

64. (original) A metallized laminate according to Claim 61, wherein said formable clear coat film is a polymeric composition selected from the group consisting of fluoropolymers, acrylic polymers, polyurethanes, ionomers, polycarbonates, polyolefins, PEG-modified polyesters, polyamide polymers, and copolymers, blends, and alloys including these polymeric compositions.

65. (original) A metallized laminate according to Claim 61, wherein said formable clear coat film comprises between about 10 and 70 weight percent of an acrylic polymer and between about 30 and 90 weight percent of fluoropolymer.

66. (previously presented) A metallized laminate according to Claim 61, wherein at least one of said plurality of discontinuous metal layers is selected from the group consisting of aluminum, cadmium, cobalt, copper, chromium, gallium, gold, indium, iron, nichrome, nickel, palladium, platinum, rhodium, stainless steel, tin, zinc, and alloys and blends containing these metals.

67. (original) A metallized laminate according to Claim 61, further comprising a thermoplastic leveling layer that is positioned between said formable clear coat film and said first outer discontinuous layer, wherein said thermoplastic leveling layer comprises polyvinyl fluoride and said formable clear coat film comprises polyvinylidene difluoride.

68. (previously presented) A metallized laminate according to Claim 61, wherein the layers defining said plurality of discontinuous metal island layers are contiguous with one another.

69. (previously presented) A metallized laminate according to Claim 68, wherein:  
said first outer discontinuous metal layer and each said inner discontinuous metal layer have a first surface that is nearer the formable clear coat film and a second surface that is on the side opposite to the side that is nearer the formable clear coat film; and  
each said second surface comprises a microscopic transitional sub-layer.

70. (original) A metallized laminate according to Claim 69, wherein each said microscopic transitional sub-layer is selected from the group consisting of a plasma-treated sub-layer and a deposited metal oxide sub-layer.

71. (original) A metallized laminate according to Claim 61, wherein said second outer discontinuous metal layer comprises metal islands having an average width of less than about 400 nm.

72. (original) A metallized laminate according to Claim 61, wherein said second outer discontinuous metal layer comprises metal islands having an average width of less than about 200 nm.

73. (original) A metallized laminate according to Claim 61, wherein said second outer discontinuous metal layer comprises metal islands having an average width of less than about 100 nm.

74. (previously presented) A metallized laminate according to Claim 61, further comprising an adhesive layer positioned on said second outer discontinuous metal layer, on the side opposite to the side that is nearer said formable clear coat film.

75. (original) A metallized laminate according to Claim 74, wherein said adhesive layer is selected from the group consisting of pressure-sensitive adhesives, heat-reactive adhesives, crosslinking adhesives, and multicomponent adhesives.

76. (original) A metallized laminate according to Claim 74, wherein said adhesive layer comprises polyurethane.

77. (original) A metallized laminate according to Claim 74, wherein said adhesive layer comprises acrylic.

78. (original) A metallized laminate according to Claim 74, further comprising a thermoplastic backing layer placed on said adhesive layer, wherein said backing layer is selected from the group consisting of polyvinyl chloride, thermoplastic olefins, polycarbonates, acrylonitrile butadiene-styrene copolymers, polystyrene, polyamide polymers, polyethylene, polypropylene, and copolymers, blends, and alloys including these polymeric compositions.

79. (previously presented) A metallized laminate according to Claim 78, wherein the metallized laminate incorporates a single tinted layer selected from the group consisting of said clear coat film, said adhesive layer, and said thermoplastic backing layer.

80. (previously presented) A metallized laminate according to Claim 61, further comprising at least one additional formable clear coat film positioned on said formable clear coat film, on the side opposite to the side that is nearer said first outer discontinuous metal layer.

81. (previously presented) A metallized laminate according to Claim 61, further comprising an extensible mask layer on the surface of said formable clear coat film, on the side opposite to the side that is nearer said first outer discontinuous metal layer.

82. (original) A part formed from the formable metallized laminate of Claim 61.

109. (previously presented) A formable, bright metallized laminate, comprising:  
a formable clear coat film;  
a first discontinuous layer of metal islands deposited on said formable clear coat film;

and

a second discontinuous layer of metal islands, wherein said first discontinuous layer of metal islands is positioned between said formable clear coat film and said second discontinuous layer of metal islands, and wherein said formable clear coat film comprises between about 10 and 70 weight percent of an acrylic polymer and between about 30 and 90 weight percent of a fluoropolymer.

110. (previously presented) The metallized laminate according to Claim 109, wherein said formable clear coat film comprises between about 30 and 50 weight percent of an acrylic polymer and between about 50 and 70 weight percent of a fluoropolymer comprising polyvinylidene difluoride.

111. (previously presented) A formable, bright metallized laminate, comprising:  
a formable clear coat film;  
a first discontinuous layer of metal islands deposited on said formable clear coat film;

and

a second discontinuous layer of metal islands, wherein said first discontinuous layer of metal islands is positioned between said formable clear coat film and said second discontinuous layer of metal islands, said first discontinuous metal layer having a first surface that is contiguous to said formable clear coat film, and a second surface that is contiguous to said second discontinuous metal layer, wherein said second surface of said first metal layer includes a microscopic transitional sub-layer.

112. (previously presented) The metallized laminate according to Claim 111, wherein said microscopic transitional sub-layer is a plasma-treated sub-layer.

113. (previously presented) The metallized laminate according to Claim 111, wherein said microscopic transitional sub-layer is a deposited metal oxide sub-layer.

114. (previously presented) The metallized laminate according to Claim 113, wherein the composition of said microscopic transitional metal oxide sub-layer is an oxide of the metal that forms said first discontinuous layer of metal islands.

115. (previously presented) The metallized laminate according to Claim 113, wherein the composition of said microscopic transitional metal oxide sub-layer is an oxide of a metal that is different from the metal that forms said first discontinuous layer of metal islands.

120. (previously presented) A formable, bright metallized laminate, comprising:  
a formable clear coat film;

a first discontinuous layer of metal islands deposited on said formable clear coat film;  
and

a second discontinuous layer of metal islands, wherein said first discontinuous layer of metal islands is positioned between said formable clear coat film and said second discontinuous layer of metal islands, further comprising at least one additional discontinuous layer of metal islands positioned between said first discontinuous metal layer and said second discontinuous metal layer.

121. (previously presented) The metallized laminate according to Claim 120, wherein:  
all discontinuous metal layers are contiguous; and  
said first discontinuous metal layer and each said additional discontinuous metal layer have a first surface that is nearer the formable clear coat film and a second surface that is on the side opposite to the side that is nearer the formable clear coat film, wherein each said second surface comprises a microscopic transitional sub-layer.

122. (previously presented) A formable, bright metallized laminate, comprising:  
a formable clear coat film;  
a first discontinuous layer of metal islands deposited on said formable clear coat film;  
and  
a second discontinuous layer of metal islands, wherein said first discontinuous layer of metal islands is positioned between said formable clear coat film and said second discontinuous layer of metal islands, further comprising an adhesive layer positioned on said second discontinuous metal layer, on the side opposite to the side nearer said first discontinuous metal layer, wherein said adhesive layer comprises a pressure-sensitive adhesive.

123. (previously presented) A formable, bright metallized laminate, comprising:  
a formable clear coat film;  
a first discontinuous layer of metal islands deposited on said formable clear coat film;  
and  
a second discontinuous layer of metal islands, wherein said first discontinuous layer of metal islands is positioned between said formable clear coat film and said second discontinuous

layer of metal islands, further comprising an adhesive layer positioned on said second discontinuous metal layer, on the side opposite to the side nearer said first discontinuous metal layer, wherein said adhesive layer comprises a heat-reactive adhesive.

124. (previously presented) A formable, bright metallized laminate, comprising:  
a formable clear coat film;  
a first discontinuous layer of metal islands deposited on said formable clear coat film;  
and  
a second discontinuous layer of metal islands, wherein said first discontinuous layer of metal islands is positioned between said formable clear coat film and said second discontinuous layer of metal islands, further comprising an adhesive layer positioned on said second discontinuous metal layer, on the side opposite to the side nearer said first discontinuous metal layer, wherein said adhesive layer comprises a crosslinking adhesive system.

125. (previously presented) A formable, bright metallized laminate, comprising:  
a formable clear coat film;  
a first discontinuous layer of metal islands deposited on said formable clear coat film;  
and  
a second discontinuous layer of metal islands, wherein said first discontinuous layer of metal islands is positioned between said formable clear coat film and said second discontinuous layer of metal islands, further comprising an adhesive layer positioned on said second discontinuous metal layer, on the side opposite to the side nearer said first discontinuous metal layer, wherein said adhesive layer comprises a multicomponent adhesive.

126. (previously presented) A formable, bright metallized laminate, comprising:  
a formable clear coat film;  
a first discontinuous layer of metal islands deposited on said formable clear coat film;  
and  
a second discontinuous layer of metal islands, wherein said first discontinuous layer of metal islands is positioned between said formable clear coat film and said second discontinuous layer of metal islands, further comprising an adhesive layer positioned on said second

discontinuous metal layer, on the side opposite to the side nearer said first discontinuous metal layer, wherein said adhesive layer comprises polyurethane.

127. (previously presented) A formable, bright metallized laminate, comprising:  
a formable clear coat film;  
a first discontinuous layer of metal islands deposited on said formable clear coat film;  
and  
a second discontinuous layer of metal islands, wherein said first discontinuous layer of metal islands is positioned between said formable clear coat film and said second discontinuous layer of metal islands, further comprising an adhesive layer positioned on said second discontinuous metal layer, on the side opposite to the side nearer said first discontinuous metal layer, wherein said adhesive layer comprises acrylic.

128. (previously presented) A formable, bright metallized laminate, comprising:  
a formable clear coat film;  
a first discontinuous layer of metal islands deposited on said formable clear coat film;  
and  
a second discontinuous layer of metal islands, wherein said first discontinuous layer of metal islands is positioned between said formable clear coat film and said second discontinuous layer of metal islands, further comprising an adhesive layer positioned on said second discontinuous metal layer, on the side opposite to the side nearer said first discontinuous metal layer, wherein:  
said adhesive layer comprises a polyurethane layer and an acrylic layer; and  
said polyurethane layer of said adhesive layer is positioned between said second discontinuous metal layer and said acrylic layer of said adhesive layer.

129. (previously presented) A formable, bright metallized laminate, comprising:  
a formable clear coat film;  
a first discontinuous layer of metal islands deposited on said formable clear coat film;  
and

a second discontinuous layer of metal islands, wherein said first discontinuous layer of metal islands is positioned between said formable clear coat film and said second discontinuous layer of metal islands, further comprising an adhesive layer positioned on said second discontinuous metal layer, on the side opposite to the side nearer said first discontinuous metal layer, wherein:

said adhesive layer comprises a polyurethane layer, an acrylic layer, and a chlorinated polyolefin layer;

said polyurethane layer is positioned between said second discontinuous metal layer and said acrylic layer; and

said acrylic layer is positioned between said polyurethane layer and said chlorinated polyolefin layer.

130. (previously presented) A formable, bright metallized laminate, comprising:  
a formable clear coat film;  
a first discontinuous layer of metal islands deposited on said formable clear coat film;  
and

a second discontinuous layer of metal islands, wherein said first discontinuous layer of metal islands is positioned between said formable clear coat film and said second discontinuous layer of metal islands, further comprising an adhesive layer positioned on said second discontinuous metal layer, on the side opposite to the side nearer said first discontinuous metal layer, wherein:

said adhesive layer comprises a layer made of an acrylic/polyurethane blend, and a chlorinated polyolefin layer; and

said acrylic/polyurethane layer is positioned between said second discontinuous metal layer and said chlorinated polyolefin layer.

131. (previously presented) A formable, bright metallized laminate, comprising:  
a formable clear coat film;  
a first discontinuous layer of metal islands deposited on said formable clear coat film;  
and

a second discontinuous layer of metal islands, wherein said first discontinuous layer of metal islands is positioned between said formable clear coat film and said second discontinuous layer of metal islands, further comprising an adhesive layer contiguously positioned on said second discontinuous metal layer, on the side opposite to the side nearer said first discontinuous metal layer, further comprising a thermoplastic backing layer; and wherein said adhesive layer comprises a polyurethane layer and an acrylic layer, said polyurethane layer of said adhesive layer being contiguously positioned between said second discontinuous metal layer and said acrylic layer of said adhesive layer; and wherein said thermoplastic backing layer comprises an acrylonitrile-butadiene-styrene copolymer layer contiguously positioned on said acrylic layer of said adhesive layer.

132. (previously presented) A formable, bright metallized laminate, comprising:  
a formable clear coat film;  
a first discontinuous layer of metal islands deposited on said formable clear coat film;  
and  
a second discontinuous layer of metal islands, wherein said first discontinuous layer of metal islands is positioned between said formable clear coat film and said second discontinuous layer of metal islands, further comprising an adhesive layer contiguously positioned on said second discontinuous metal layer, on the side opposite to the side nearer said first discontinuous metal layer, further comprising a thermoplastic backing layer; and  
wherein said adhesive layer comprises a polyurethane layer, an acrylic layer, and a chlorinated polyolefin layer, said polyurethane layer being contiguously positioned between said second discontinuous metal layer and said acrylic layer, and said acrylic layer being contiguously positioned between said polyurethane layer and said chlorinated polyolefin layer;  
and  
wherein said thermoplastic backing layer comprises a thermoplastic olefin layer contiguously positioned on said chlorinated polyolefin layer of said adhesive layer.

133. (previously presented) A formable, bright metallized laminate, comprising:  
a formable clear coat film;

a first discontinuous layer of metal islands deposited on said formable clear coat film;  
and

a second discontinuous layer of metal islands, wherein said first discontinuous layer of metal islands is positioned between said formable clear coat film and said second discontinuous layer of metal islands, further comprising an adhesive layer contiguously positioned on said second discontinuous metal layer, on the side opposite to the side nearer said first discontinuous metal layer, further comprising a thermoplastic backing layer;

wherein said adhesive layer comprises an acrylic/polyurethane layer and a chlorinated polyolefin layer, said acrylic/polyurethane layer being contiguously positioned between said second discontinuous metal layer and said chlorinated polyolefin layer; and

wherein said thermoplastic backing layer comprises a thermoplastic olefin layer contiguously positioned on said chlorinated polyolefin layer of said adhesive layer.

134. (previously presented) A formable, bright metallized laminate, comprising:  
a formable clear coat film;  
a first discontinuous layer of metal islands deposited on said formable clear coat film;  
and  
a second discontinuous layer of metal islands, wherein said first discontinuous layer of metal islands is positioned between said formable clear coat film and said second discontinuous layer of metal islands, further comprising a thermoplastic leveling layer that is positioned between said formable clear coat film and said first discontinuous metal layer.

135. (previously presented) The metallized laminate according to Claim 134, wherein said thermoplastic leveling layer comprises polyvinyl fluoride and said formable clear coat film comprises polyvinylidene difluoride.

136. (previously presented) The metallized laminate according to Claim 134, further comprising a thermoplastic primer layer positioned between said formable clear coat film and said leveling layer.
